WEATHER OF CONCERN

Weather of Concern

- The National Weather service has issued a Red Flag Warning for portions of Coastal and Central California mountainous and valley areas as a result, potential fire starts will be possible due to gusty north winds, low humidity and dry fuels.
- **Active Weather Warnings, Watches and Advisories by County:**
- <https://alerts-v2.weather.gov/counties/CA>

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

*** Areas of "High Risk" of Significant Fire Potential due to moderately strong, gusty NW to NE winds and low RH through Tuesday morning ***

A low pressure trough over the northern Great Basin will keep the region under a rather strong northerly flow along the trough's western side. A few disturbances flowing around the trough at times this week may bring a bit of very light rain to our far northern or far eastern areas through Tuesday, otherwise it will be dry across the region.

Moderately strong, gusty NW to NE winds of 10-20 mph with gusts mostly 25-35 mph are expected through Tuesday morning, particularly for the Mid Coast to Mendocino (NC02), Bay Area Mountains (NC03B) and Sacramento Valley/Foothills (NC05). Such conditions have led to "High Risk" of Significant Fires being designated in those areas. Locally stronger gusts up to around 45 mph are possible. Less wind and higher RH will return mid-week and lower the Significant Fire Potential to below "High Risk" in those areas. Temperatures will be reasonably near seasonal values this week with some cooling over the next few days then warming again for the latter half of the week. The warmest inland areas will be in the mid and upper 70s the next few days then warming into the lower and mid 80s Wednesday onward.

SOUTHERN CALIFORNIA

Locally windy across the deserts today*

Cooler through Tuesday

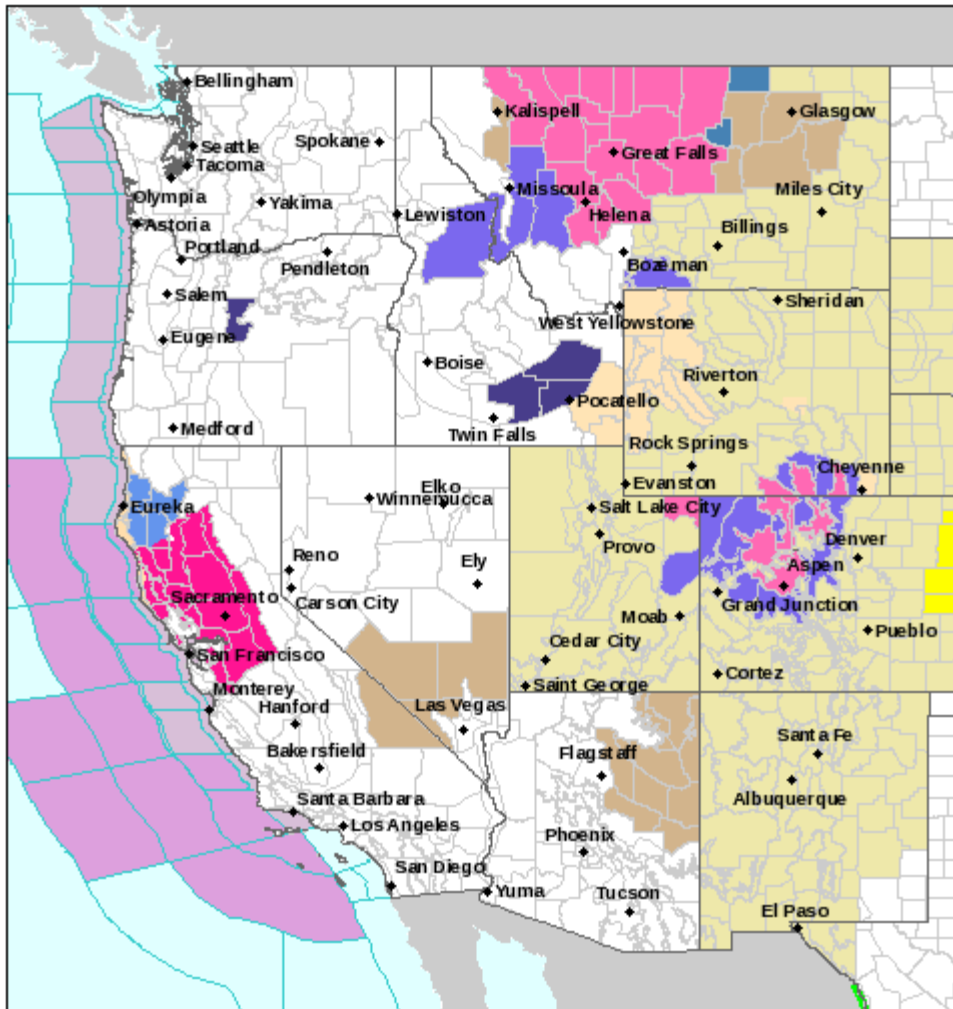

A trough will drop into the Pacific Northwest and the Northern Rockies later today and will help form an area of low pressure over Northern California by Tuesday. As a result, a cooling trend can be expected across the region with increasing onshore flow. West to northwest winds of 15-25 mph will be common across the central coast, the Banning Pass, and the eastern Cleveland National Forest this afternoon. The strongest winds will be over Tehachapi Mountains leading into the Antelope Valley with speeds in the 20 to 30 mph range with gusts to near 50 mph through this evening.

Highs today will be in the 60s to mid-70s in the mountains with 70s to mid-80s in the valleys. The marine layer will deepen along the coast with night and morning low clouds and fog becoming more prevalent across the coastal areas through Tuesday, mainly south of Point Conception. After today, winds will diminish in the aforementioned areas but it will still be breezy to locally windy during the afternoon and evening hours. During the latter half of the work week, the trough in the West will weaken and will move east as high pressure over the Pacific builds into the district. This will signal a warming and drying trend across the area that will be most noticeable Friday and into next weekend. This warming trend will be accompanied by light offshore flow for some locally breezy conditions below a few of the passes of Southern California during the late night and early morning hours. After temperatures bottom out on Tuesday, daytime highs will likely climb back into the 90s across most inland valley areas by next weekend.
